

Intersection Improvement

TRANSMITTER RD AT US 231 INTERSECTION

SOLUTION

This project will consist of the addition of a dedicated right-turn lane for south-bound traffic at the intersection of Transmitter Road and U.S. 231. This project will enhance daily traffic by reducing both stops and delays for all approaches at the intersection.

PROBLEM

Motorists on U.S. 231 endure significant delays because of the time that is needed for the traffic signal to serve Transmitter Road.
