

Stormwater Improvement

HENLEY DRIVE STORMWATER IMPROVEMENTS

SOLUTION

This project will repair/replace current stormwater pumps and install storm structure and associated piping to move stormwater discharge locations from across private property to public property within the same stormwater system.

The project should reduce and eliminate flooding issues in the area, which will reduce the need for road closures and open the corridor to foot traffic from the beach for surrounding residents.

PROBLEM

There have been severe flooding issues at the intersection of Henley Dr and Montgomery Dr, the old Panama City Beach pump house property, and all the surrounding properties and their associated parking.
