

Stormwater Improvement

POSTON DRIVE STORMWATER RUNOFF PREVENTION

SOLUTION

This project consists of the paving and stabilization of an existing dirt roadway (Poston Dr) for the purpose of improving water runoff quality within the St Andrew Bay System.

A roadside swale system is also proposed in an effort to convey stormwater runoff to the point(s) of discharge.

The intent of this project is to reduce the impact of sedimentation and pollutant discharge into East Bay.

PROBLEM

Poston Drive is a dirt roadway that contributes to sediment and pollutant discharge into East Bay. The roadway reduces the overall water runoff quality in the St. Andrew Bay System.
