

Resurfacing

COUNTY 2300 REPAVING

SOLUTION

This project consists of repaving County 2300 from State 77 to the Lansing Smith facility entrance.

PROBLEM

County 2300 serves as the link to the steam plant and the Bay County Emergency Operations Center, as well as ongoing residential development in the area. With substantial pavement deterioration along this stretch, improving this connection and upgrading the pavement to account for the expected increase in traffic is essential.
