

Stormwater Improvement

STATE AVE BOX CULVERT REPLACEMENT

SOLUTION

The proposed project replaces the existing box culvert and elevates the existing roadway to prevent flooding and the closure of this major thoroughfare.

PROBLEM

State Avenue is a collector road with a high traffic volume. It serves as an access road to multiple businesses, schools, hospitals and residential areas. State Avenue recurrently floods during large rain events, resulting in the closure of the roadway, significant erosion and washout of the downstream shoulder.
