

Stormwater Improvement

N. KIMBREL AVE DRAINAGE IMPROVEMENT

SOLUTION

This improvement project for North Kimbrel Ave will replace three 34 inch elliptical reinforced concrete pipes with two 3 foot by 5 foot box culverts and will be located 0.2 miles from State Road 22, near Lois St. New pipes and drainage inlets will be installed along the Kimbrel Ave right of way north and south of the culvert crossing. Proposed project is to improve the safety of the roadway. Once the box culverts are installed North Kimbrel Ave will be re-graded and resurfaced.

PROBLEM

The existing roadway is subject to flooding and becomes submerged during heavy rain events. During storm events it is typical to detour traffic from this segment of roadway. Several residential neighborhoods use North Kimbrel Ave to access main thoroughfares. The drainage improvements will allow it to remain open during heavy rain events.
